# IN-CAR TELEPHONE

---

This supplement replaces the information under the heading of 'Safety Timer' in the following In-Car Telephone Handbook:

Jaguar XK8 range & Jaguar XJ8 range

Part Number JJM 10 31 18 / 90, Page 14.

## Safety Timer

When the ignition is turned to position '0' (OFF) and assuming the safety timer has been set to a value greater than zero, the phone will remain on for the duration of the timer period. See 'Telephone User Guide' for more information. The recommended safety timer value is 15 minutes which is the value set when it leaves the factory.

**Note: If the ignition is off and a call is received during the safety timer period, no ringing will be heard until the ignition is turned on.**

In the situation where both the 'Auto Answer' and the 'Safety Timer' feature have been selected a possible cause of annoyance may occur. Should you switch off the ignition and leave the vehicle for a short period and in your absence a call is received, the phone will ring twice, although it cannot be heard. The caller will be able to talk into his phone, thinking he has connected to you, but you will not be in the car to talk back.

At a later time, the caller may inform you that he suspects there is a fault with your phone because he heard no reply from you. However, there is no fault, merely the logical consequence of having the above two feature options enabled together.

If you wish to avoid this situation, you can deselect either the Safety Timer feature (but lose the advantage of not having to re-enter PIN and Unlock codes after every short stop) or deselect the Automatic Answer feature (but lose the advantage of having the phone carry out Automatic Answer). See the 'Telephone User Guide' for the deselection procedure.
